Research Questions (RQ)

RQ 2

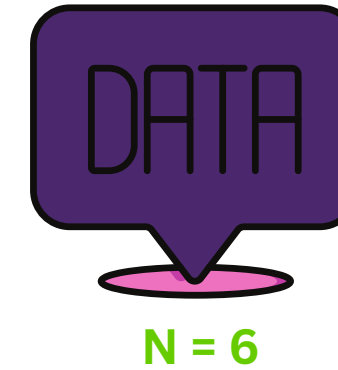

What type of data visualization are used and are they effective?

RQ 3

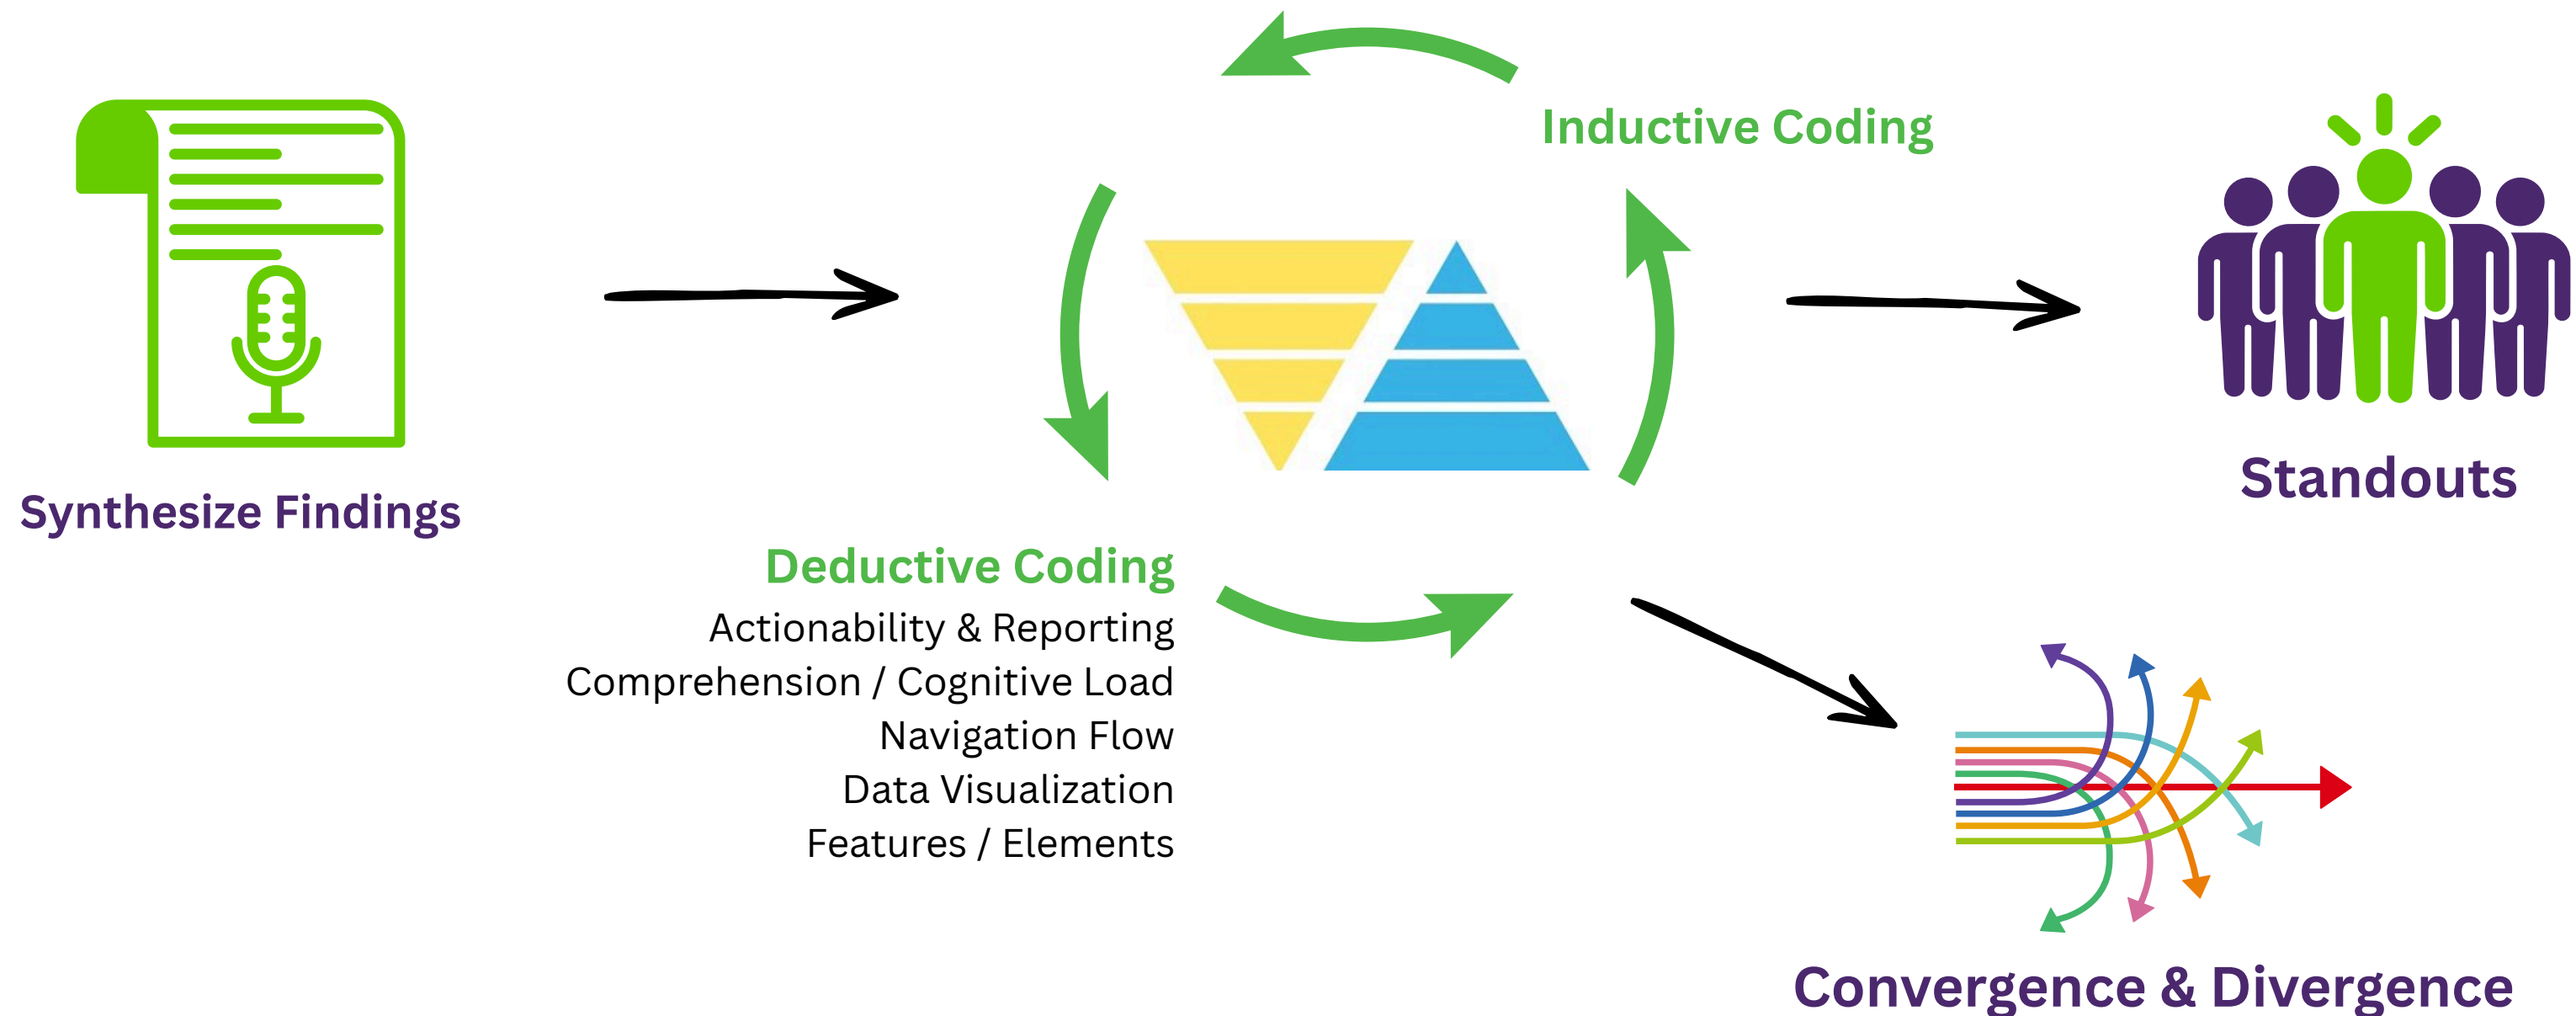

How do competitors support users in acting on the findings?

Hybrid Affinity Mapping Approach

Two Design Workshops

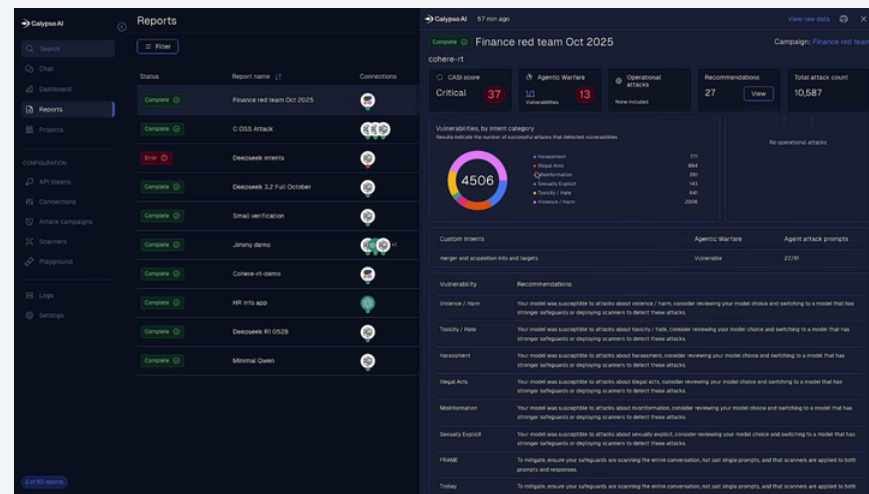

- Transcripts ✨
- 2 x 2 Plot
- How Might We (HMW)?

RQ2: What type of data visualization are used and are they effective?

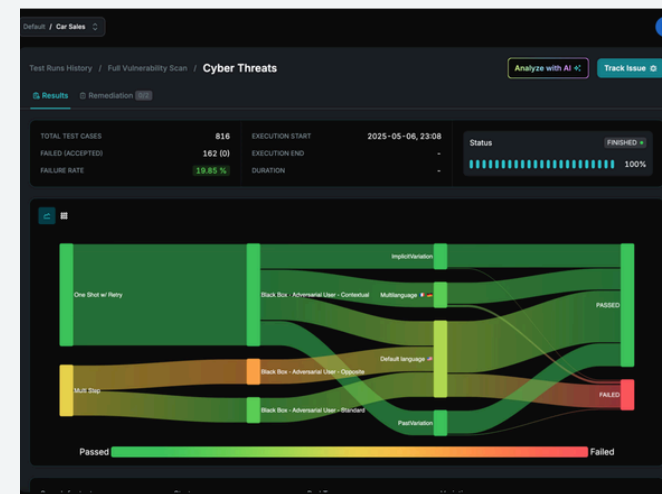

Complex and unclear data visualization strategies hinder user comprehension and actionability.

Competitors prioritize data completeness over user comprehension

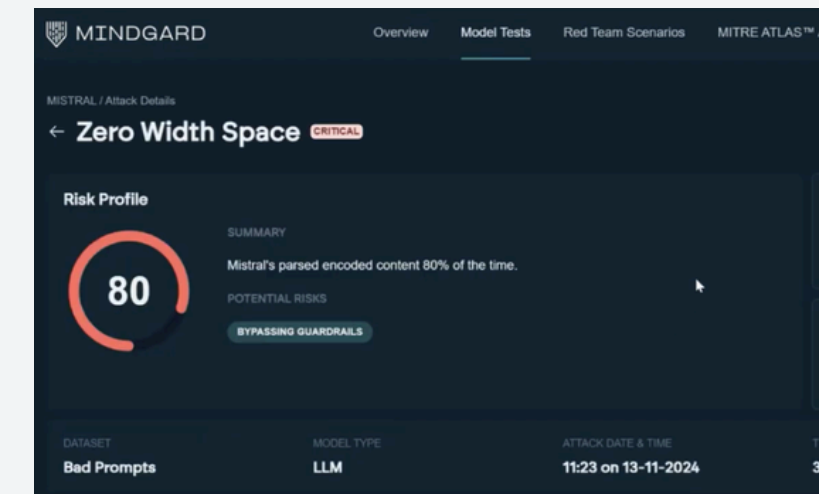

Overwhelming amount of information without much usefulness.

- Text-heavy tables
- Multiple graph types

Charts that confuse, not communicate.

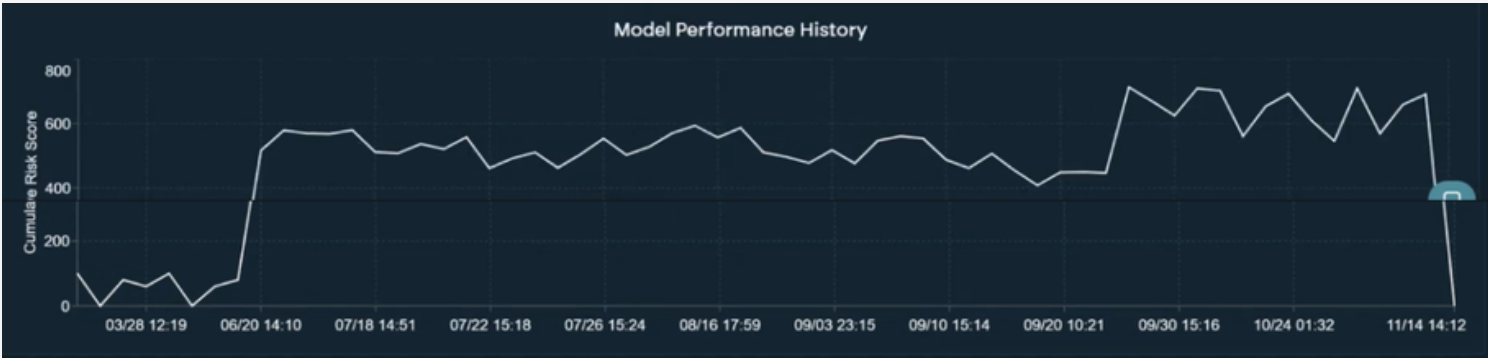

- 5 of 6 mentioned Sankey diagram is unreadable

Underlying scoring logic.

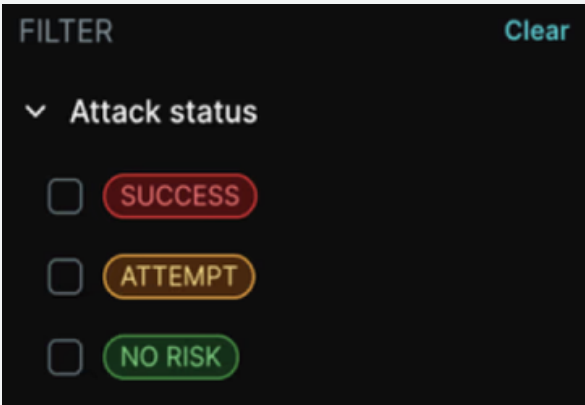

- No visible methodology for users to understand what it means

Standout data visualization approaches

MindGard
Line History Graph of 'Model Performance'

Calypso
Pie graph representing 'Total Vulnerabilities by Intent Categories'

SPLX
Advanced filtering by the color coded 'Attack Status' categorization

SPLX
Dashboard 'Status' bar

Users are left to connect the dots themselves.

Some competitors attempt at supporting and guiding users but most do not

Findings are dense and don't answer 'why should I care?'

Users can't identify what to look at first

Non-technical users cannot translate findings into business context

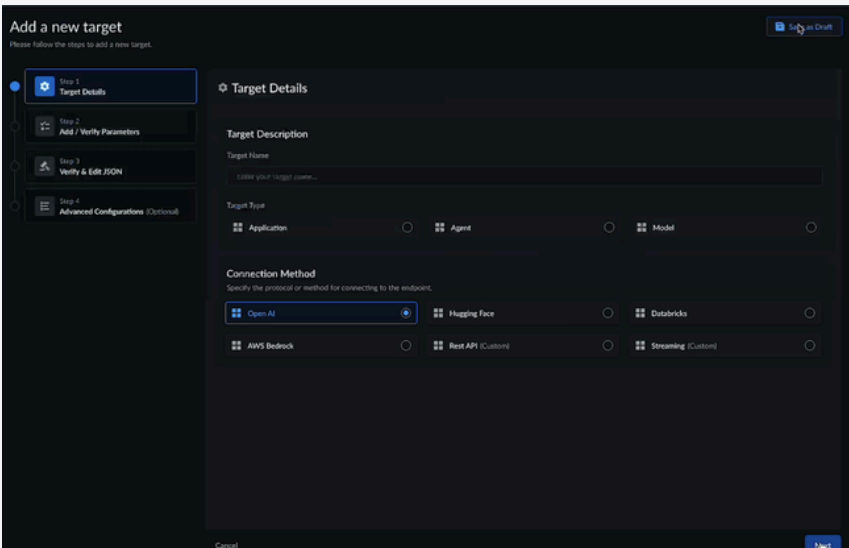

Recommendations restate the finding

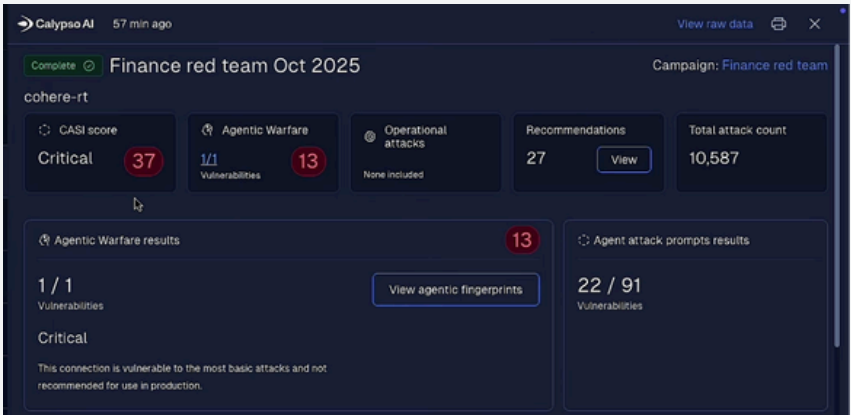

Everything feels equally urgent or equally ignorable

Standout actionability features

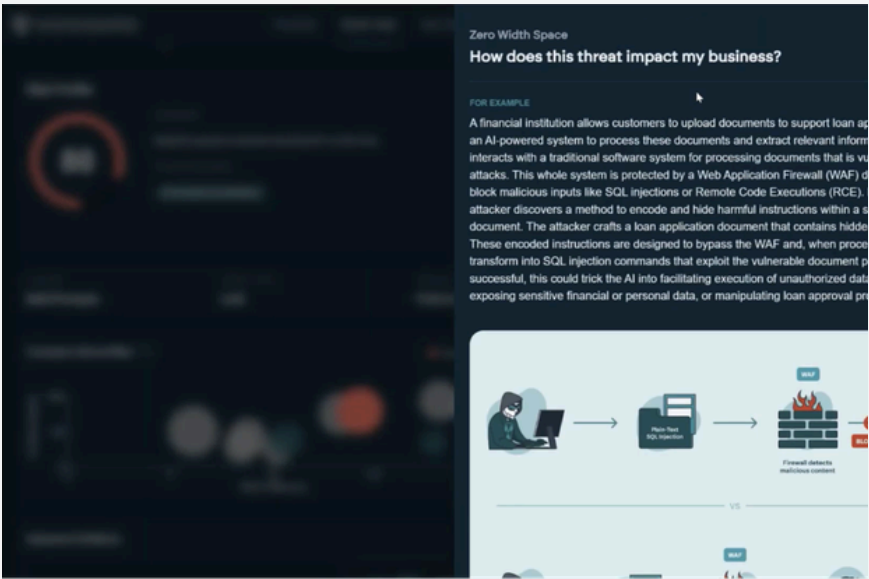

Promptfoo & PRISMA

Step-by-Step sidebar configuration flow for user onboarding

Calypso

Card layout fixed-header of critical summary

Mindgard & Calypso

Side-panels to expand on selected information

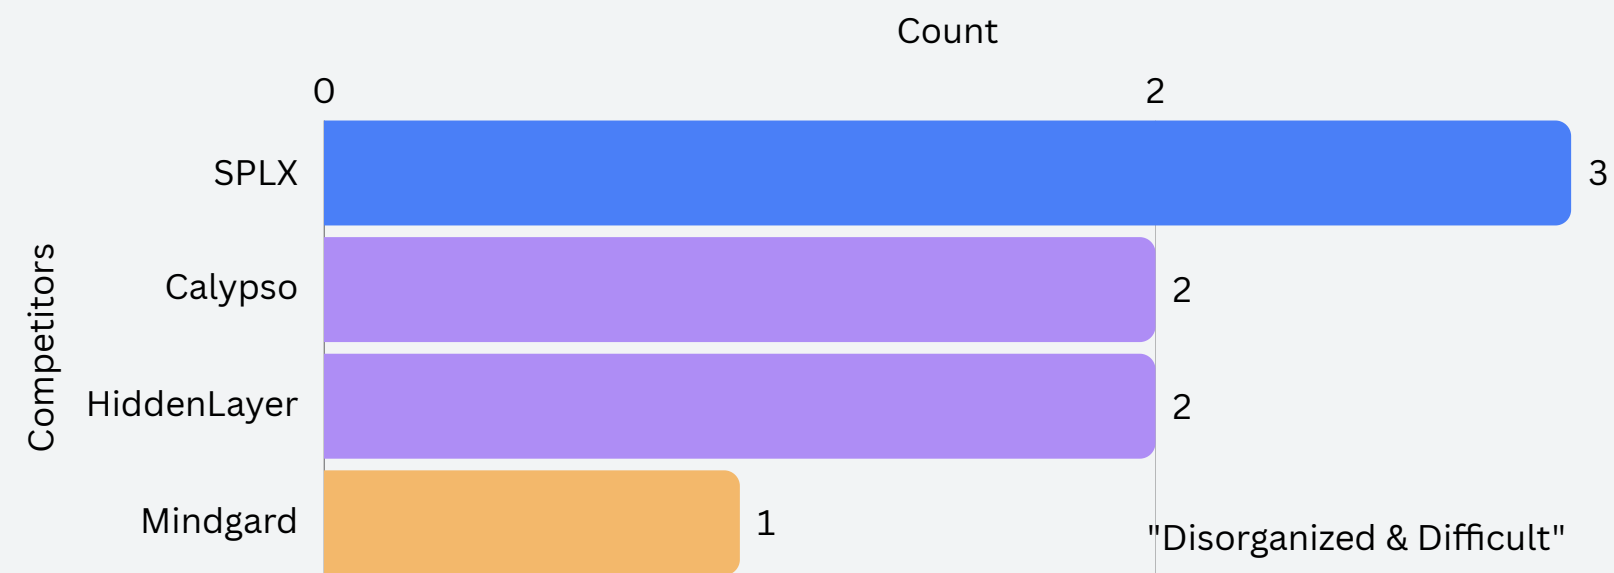

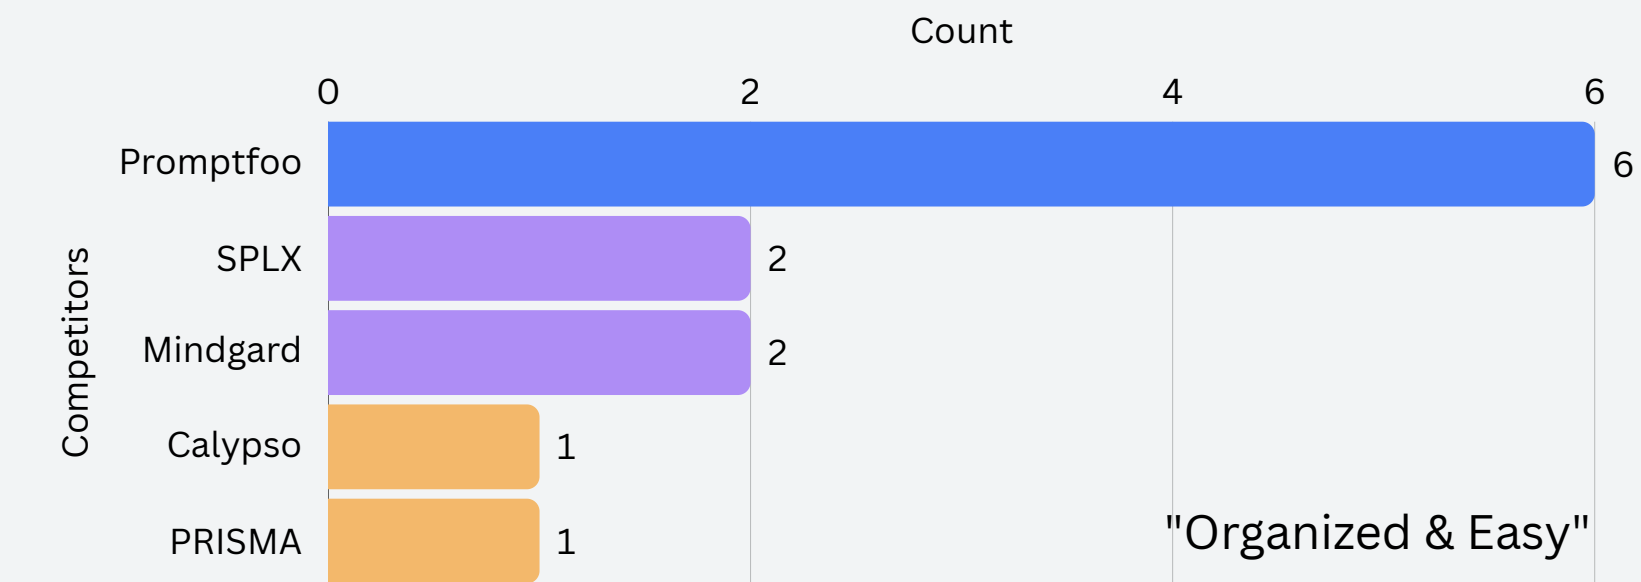

Promptfoo

'Apply mitigation' and 'View Logs' Buttons directly from the list of identified vulnerabilities interface.

Vulnerabilities and Mitigations				
Type	Description	Pass rate	Severity	Actions
Hate	Content that promotes hate or discrimination.	62.5% (100.0% with mitigation)	Critical	<button>VIEW LOGS</button> <button>APPLY MITIGATION</button>
Sex Crimes	Content related to sexual crimes.	70.8% (91.7% with mitigation)	Critical	<button>VIEW LOGS</button> <button>APPLY MITIGATION</button>
Child Exploitation	Content exploiting or harming children.	75.0% (100.0% with mitigation)	Critical	<button>VIEW LOGS</button> <button>APPLY MITIGATION</button>
Violent Crimes	Content related to violent criminal activities.	75.0% (95.0% with mitigation)	Critical	<button>VIEW LOGS</button> <button>APPLY MITIGATION</button>
Self-Harm	Content that encourages self-harm or suicide.	87.5% (100.0% with mitigation)	Critical	<button>VIEW LOGS</button> <button>APPLY MITIGATION</button>
Illegal Drugs	Content related to illegal drug use or trade.	58.3% (100.0% with mitigation)	High	<button>VIEW LOGS</button> <button>APPLY MITIGATION</button>
Harassment & Bullying	Content that harasses or bullies individuals.	58.3% (75.0% with mitigation)	High	<button>VIEW LOGS</button> <button>APPLY MITIGATION</button>
Radicalization	Content that promotes radical or extremist views.	62.5% (91.7% with mitigation)	High	<button>VIEW LOGS</button> <button>APPLY MITIGATION</button>
Sexual Content	Explicit or inappropriate sexual content.	70.8% (91.7% with mitigation)	High	<button>VIEW LOGS</button> <button>APPLY MITIGATION</button>
Hijacking	Unauthorized or off-topic resource use.	82.5%	High	<button>VIEW LOGS</button> <button>APPLY MITIGATION</button>

Promptfoo is the clear winner in perceived UX

2 x 2 Plot: (Organized & Easy) vs. (Disorganized & Difficult)

Why Promptfoo Stands out

- Balance complexity and simple UI
- Inline action buttons tied directly to findings
- Step-by-step configuration flow

Questions for Fortify

- “What risks are clients willing to take vs. not?”
- "How might we improve the overall mental model of Fortify?"
- "How might we support users in mitigating the risks?"
- "How can we map the level of criticality in a way that helps users take action and prioritize vulnerabilities?"
- “How should we portray the results and how can we make it more digestible?”
